PREFACE, i

MAP - COLORADO COUNTIES, ii

MAP - COLORADO PLANNING REGIONS, iii

SECTION I - Historical and Projected Industry Information, 1

Graph: Average Annual Industry Growth Rates - 1985 to 1990 - Colorado, 3

Narrative: Summary of National Economic Activity in 1990, 5

Outlook for the National Economy in 1991, 8

Outlook for the Colorado Economy, 9

Major Industry Division Employment Forecasts - FY's 1991-1993, 18

Estimated Total Employment by Major Industry: Colorado, 1991-1996, 19

Graph: Major Industry Representation, United States - 1980 and 1990, 20

Graph: Major Industry Representation, Colorado - 1980 and 1990, 21

Graph: Growth Rate Comparisons of Private Nonagricultural Wage and Salary Employment, United States and Colorado - 1984-1990, 22

SECTION II - Occupational Information, Colorado and the United States, 23

Narrative: Colorado's Occupational Outlook, 25

Top Ten and Bottom Ten Occupations in Terms of Growth, Colorado and the United States, 28

Occupations Estimated to be in Oversupply, Colorado - July 1990 through December 1990, 29

Occupational Estimated to be in Undersupply, Colorado - July 1990 through December 1990, 33

SECTION III - General Demographic Information, Colorado and the United States, 37

Estimated Labor Market Data Summary - FY's 1990-1993, 39

Population by Age, Sex, and Race/Ethnicity, Colorado - April 1980, FY's 1991 and 1992, 40

Estimated Employment Status by Race/Ethnicity and Sex Colorado - FY 1991 Annual Average, 41

Individuals Requiring Employability Services - FY's 1991 and 1992, 42

Estimates of Substantial Segments of the JTPA-Eligible Population - Program Year 1991, 43

Public School Pupils and Dropouts by JTPA Service Delivery Area - 1989-1990, 44

Number of Live Births to Teenagers, by Age Group, 1989, 45

Estimated Number of Persons in Poverty by County - FY 1991, 46

Estimates of Youth Population and Labor Force, Colorado by County - FY 1991, 47

Estimated Youth Labor Force by Race and Hispanic Origin, Colorado and Selected Areas - FY 1991, 50

Colorado Veteran Population by County, April 1980 and March 1986, 54

Colorado Labor Force Estimates by County
Annual Average 1989, 56
Annual Average 1990, 57

Graph: Annual Average Unemployment Rates, United States and Colorado - 1979-1990, 58

Per Capita Personal Income by County, 1983 - 1988, 59

Graph: Per Capita Personal Income, United States and Colorado - 1983-1988, 61

Consumer Price Index, United States and Denver-Boulder Area - 1986-1990, 62

SECTION IV - Employment Service Data, 63

Over-the Year Change Analysis of Services to Individuals FY's 1989 and 1990, 65

Job Service Applicants by Occupation - FY 1990, 66

PREFACE

This publication was prepared by the Labor Market Information Section of the Colorado Department of Labor and Employment, in cooperation with the Employment and Training Administration, U.S. Department of Labor. It is published annually and is designed to provide historical, current, and projected labor market information for Colorado and various regions within the State. For the reader's convenience, the report is divided into sections based on subject matter and geographical location. The first section contains narrative, graphs, and tables on major industry employment in Colorado. The second section focuses on particular occupations and occupational groups. Section three contains general demographic information, including personal income data, labor force and population by race/ethnicity, and the poverty population. Section four contains data from the Department of Labor's Employment Service. Following section four are eleven separate sections, each of which contains labor market information for a particular geographic area of the State. Ten of the areas coincide with Service Delivery Areas under the Job Training Partnership Act.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

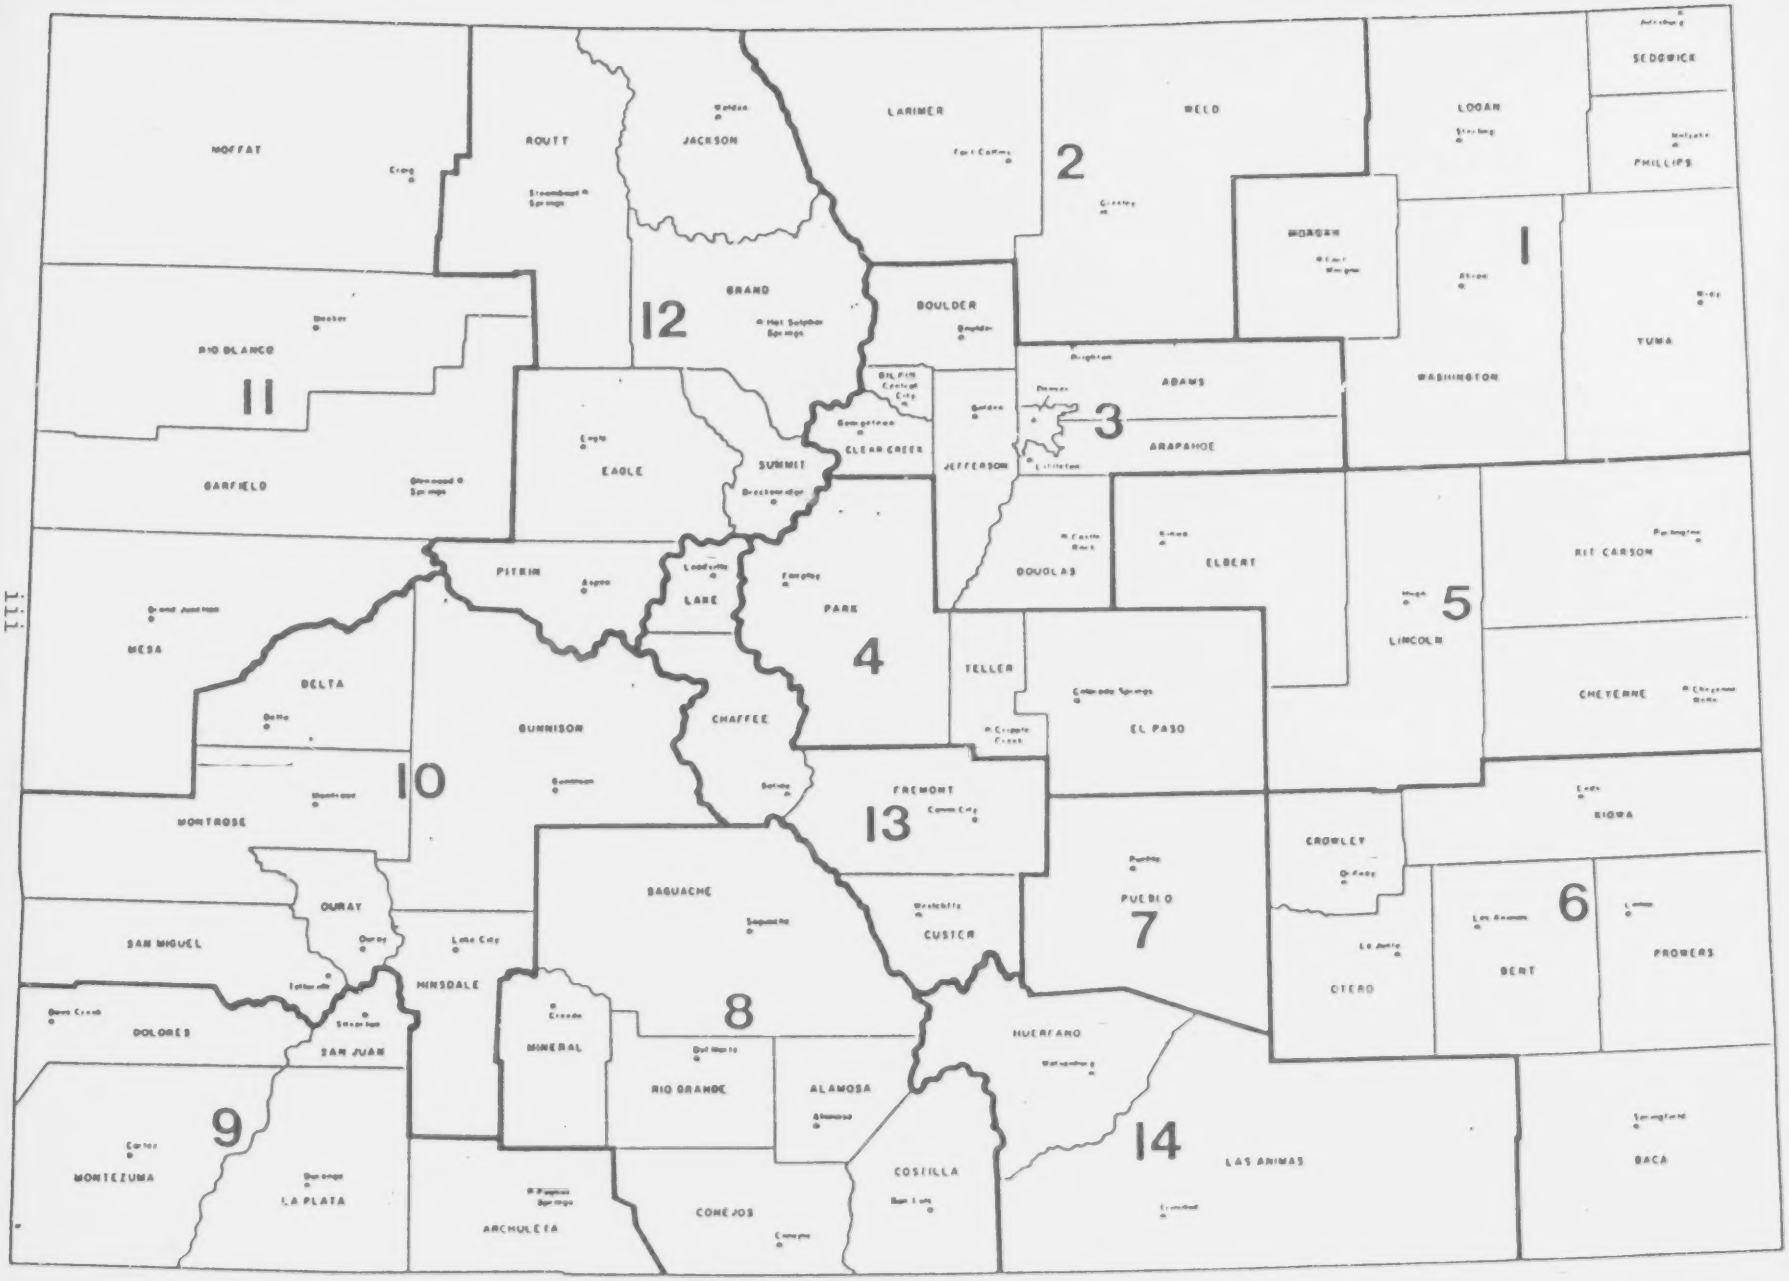
STATE OF COLORADO



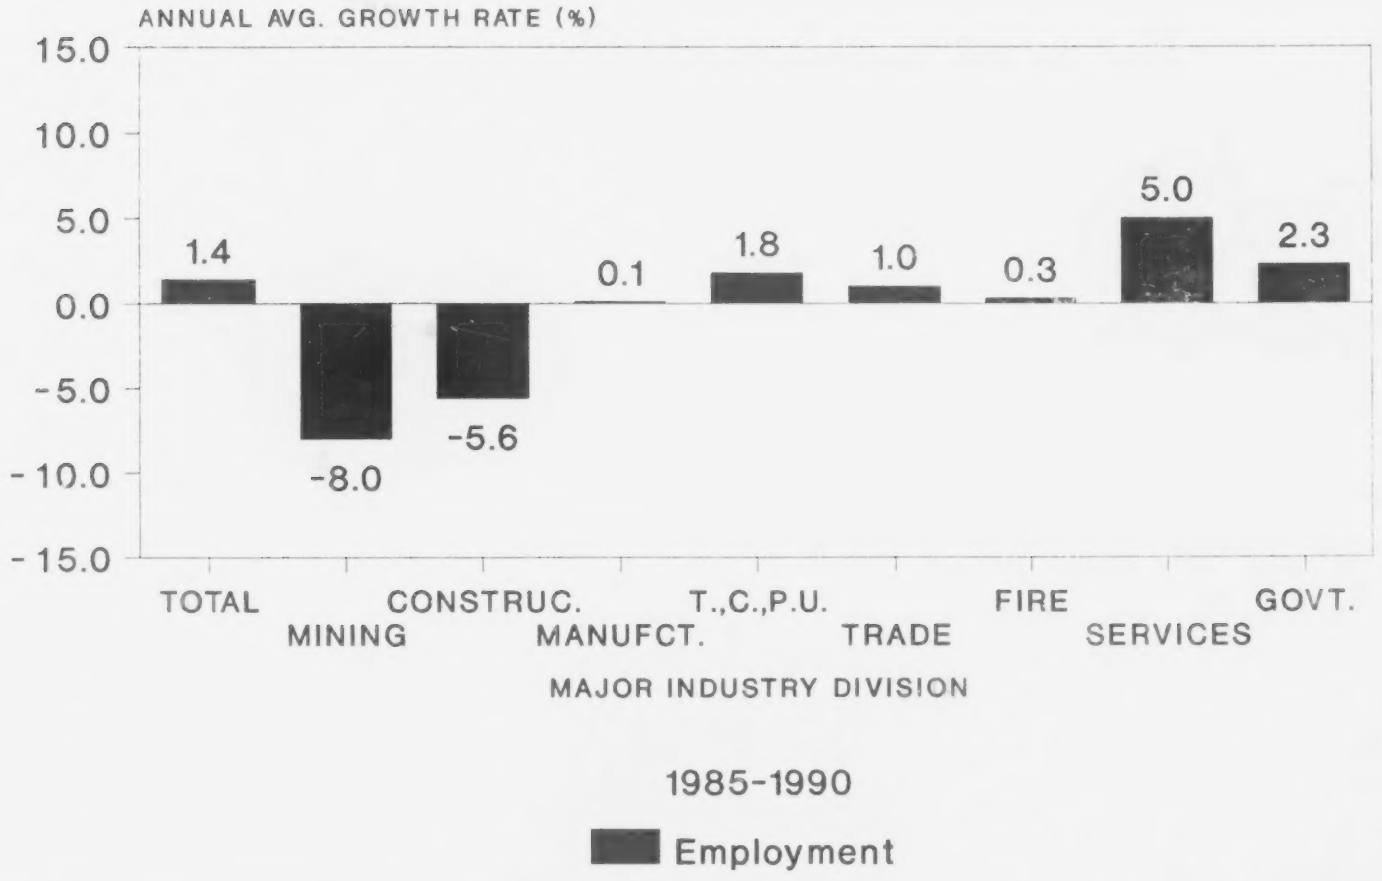
SECTION I

HISTORICAL AND PROJECTED INDUSTRY INFORMATION

COLORADO AND THE UNITED STATES

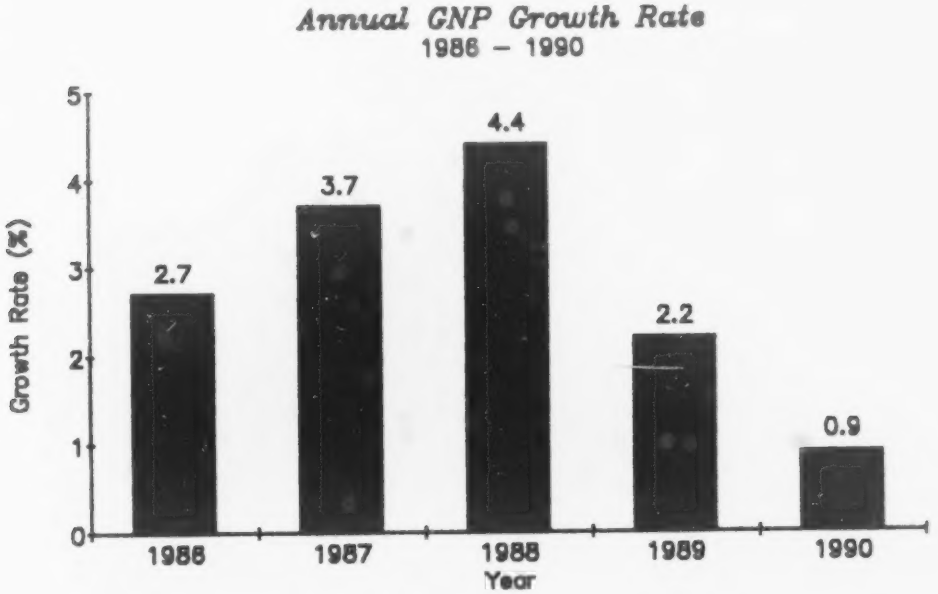
This section contains narrative, graphs and tables on employment by major industry division in Colorado and the United States.

INDUSTRY GROWTH RATES
STATE OF COLORADO



SOURCE: COLORADO DEPT. OF LABOR,
CURRENT EMPLOYMENT STATISTICS DATA

The nation's total output of goods and services (gross national product) increased 0.9 percent on an annual basis in 1990. A review of the four major categories of GNP reveals that three of them grew at slower rates in 1990 than they did in 1989. Personal consumption expenditures, which comprise nearly two-thirds of GNP, grew by 1.0 percent in 1990 compared with 2.2 percent the year prior. Private domestic investment declined by 3.7 percent in 1990, as investment in residential and non-residential structures fell off rapidly in the last half of the year. The international trade position of the United States continued to improve in 1990, as exports grew at a faster rate than imports. However, the rate of growth in U.S. exports was slower than it was in 1989. Finally, government purchases of goods and services grew by 2.8 percent in 1990, compared with 1.7 percent in 1989.

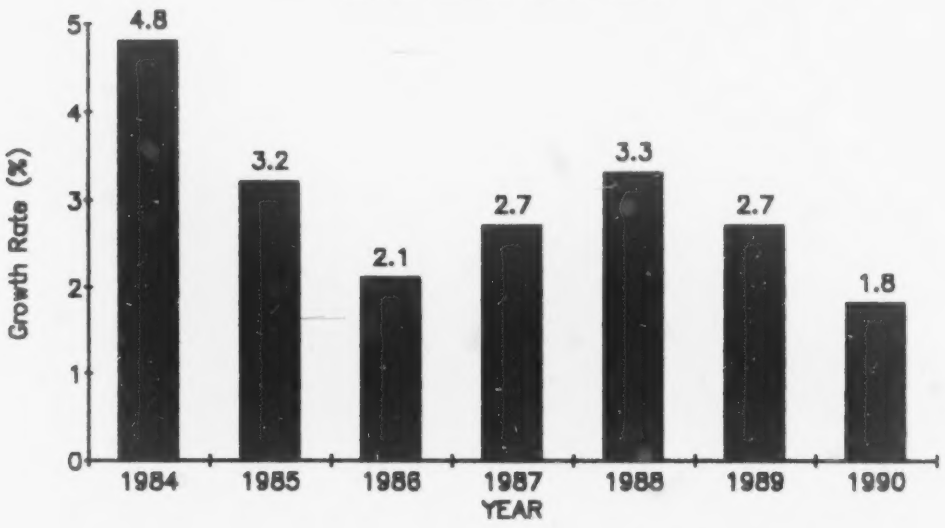


The national economy fell into a recession in the second half of 1990, although the timing of the downturn has yet to be officially pegged. After growing by a weak 1.4 percent in the third quarter, real GNP fell by 2.0 percent in the fourth quarter. Factors contributing to the decline in GNP were declines in personal consumption expenditures and business

investment. Automobile and home sales were down dramatically in the fourth quarter.

The slowing of the national economy was evident in the job market. Only 1.9 million non-farm jobs were added to the employment base in 1990. This represented the fewest jobs added on an annual basis since 1983. The weakest industry divisions were manufacturing, which declined by 362,000 jobs, and construction, which added only 5,000 jobs. Services was the strongest division, although it's 1.1 million job growth was significantly fewer than the 1.4 million jobs the division added in 1989. Government added 526,000 workers to their payrolls in 1990, with most of the increase coming in state and local government. Mining employment registered its first annual job increase since 1984, with a large share of the 35,000 increase coming in the oil and gas sector.

Annual Job Growth Rate (Non-Farm)
United States, 1984–1990



The rate of inflation in 1990 was slightly higher than it was in 1989. The Consumer Price Index (CPI) rose by 5.4 percent in 1990, compared with a 4.8 percent increase in the previous year. Among the major categories of the CPI, the largest price increase occurred in medical care, which rose by 9.0 percent. Other categories with larger than average price increases were "other goods and services" (tobacco, personal care expenses, and educational expenses) which rose by 7.7 percent, food and beverages (+5.8 percent), and transportation (+5.6 percent).

The government's fiscal policy was moderately stimulative in 1990. Government purchases of goods and services increased by 2.8 percent in inflation-adjusted terms during the year. No major new taxes were implemented, although the federal budget agreement enacted in the fall of 1990 mandated some tax increases effective in January 1991. Federal national defense purchases rose $9.2 billion dollars in the fourth quarter as the defense department geared up for war in the Persian Gulf region. Non-defense spending fell by $4.2 billion in the fourth quarter.

The Federal Reserve Board's monetary policy underwent a fairly dramatic shift in the second half of 1990. In 1989, the Fed's primary goals were inflation-fighting and engineering a "soft landing" for a slowing economy. By the final quarter of 1990, in the face of dramatic evidence that the economy was rapidly losing steam, the Fed made use of several of the key recession-fighting tools in its arsenal. The federal funds rate, the rate which banks charge on overnight loans to other banks, fell twice late in the year as a result of Fed actions to increase the money supply. For the first time since 1983, the Fed lowered the reserve requirement for banks, hoping to free up more bank funds for loan-making and other investments. Finally, the Fed cut the discount rate (the rate that the Fed charges banks for short-term loans) in late 1990 and early 1991. All of these moves were designed to ease the "credit crunch" and encourage banks to make more loans to credit-worthy businesses and consumers.

In summary, the national economy probably entered a recession in the fourth quarter of calendar year 1990. Two factors which probably contributed to the onset of the recession were:

(a) The Fed's effort to slow down the economy in the interest of inflation-fighting in 1989, and
(b) Weak consumer and business spending during most of 1990.

Exports by U.S. business continued to grow at a relatively strong pace in 1990. Strong exports and relatively strong government spending were probably the most buoyant categories of gross national product during the year.

The conclusion of the war in the Persian Gulf region will probably lift business and consumer confidence, at least in the short term. The rebuilding of Kuwait should also boost business for many types of U.S. companies. Inflation will probably be quite restrained in 1991, as the receding economy and lower oil prices hold down price increases.

However, the weight of negative factors in the national economy is considerably larger. Foremost among the negative considerations is the very high levels of debt held by U.S consumers, businesses, and government entities. The existence of already high debt levels will probably limit the effectiveness of the Fed's current monetary policy, i.e., to encourage more borrowing in the private sector. The federal government's increasing budget deficit makes the enactment of a new stimulative fiscal policy (e.g. lower payroll taxes) virtually unthinkable.

The national unemployment rate rose to 6.5 percent on a seasonally adjusted basis in February of 1991. Employer payrolls were reduced by 185,000 jobs during February, following a previous reduction of 233,000 jobs in January. Continuing job losses, particularly in the relatively high-paying manufacturing industry, reduce spendable income in the consumer sector. The reduction in spending usually leads to more job losses. Another result of higher joblessness is higher outlays for unemployment benefits. At this writing, the U.S. Congress was acting to raise appropriations to the states for the administration of unemployment insurance programs.

The existence of recessionary or slow growth conditions in the economies of many of our major trading partners will limit export growth for U.S. business. Weak economic activity in Canada, Japan, and Britain will greatly limit their demand for U.S. goods, particularly big-ticket durable goods.

In short, it is likely that the factors contributing to recession will prevail over factors likely to stimulate growth at least through the first half of 1991. A strong resumption of growth in consumer spending is not likely while job losses continue. A Commerce Department survey carried out in the fall of 1990 revealed that U.S. business planned to increase real spending on plant and equipment by only 0.4 percent in 1991, with decreases planned in many key manufacturing industries. Given the scenario outlined above, we predict that real GNP will increase by 0.7 percent in 1991 . Inflation is expected

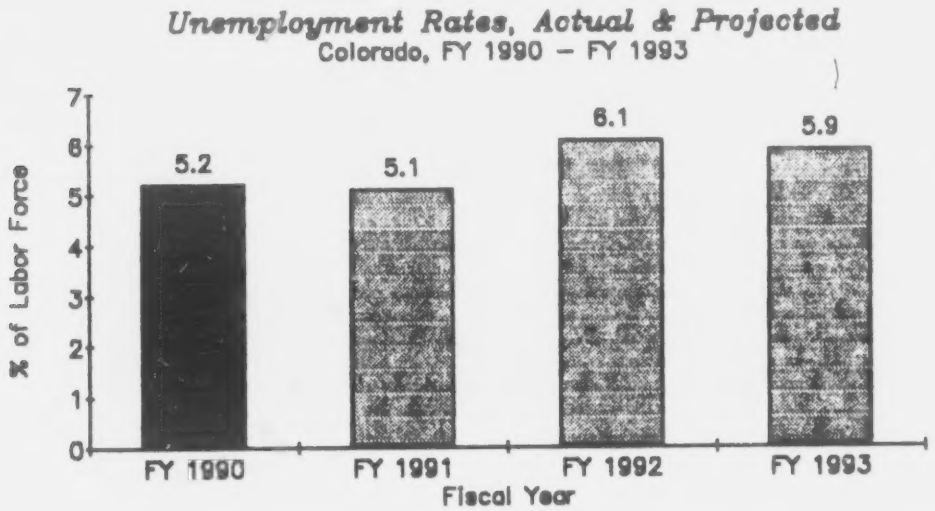
to be quite restrained, with the overall price level rising by 4.1 percent in 1991.

Summary of 1990 Data and Outlook for the Colorado Economy

Colorado employers added 35,900 non-agricultural jobs to their payrolls in 1990. Only about seven percent of the new jobs were in goods-producing industries (i.e. mining, construction, and manufacturing). In 1989, 46,200 new non-agricultural jobs were added, of which about five percent were goods-producing.

The labor force expanded by 61,000 persons in 1990, after a decline of 13,000 persons the year prior. The unemployment rate in the state in 1990 was 4.9 percent, compared with 5.8 percent in 1989. There were 11,000 fewer unemployed persons in 1990 than there were in 1989.

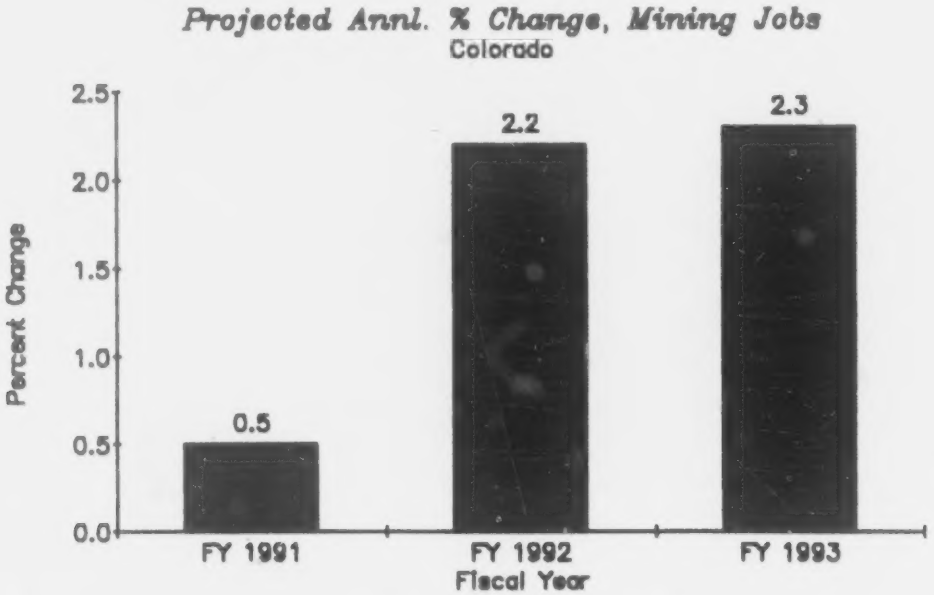
By fiscal year 1992, job growth in Colorado is expected to weaken significantly. Non-agricultural wage and salary jobs are expected to increase by 1.5 percent in FY 1992, compared with a predicted 2.1 percent increase in FY 1991. As a result of slower job growth and increasing migration into Colorado, the unemployment rate is predicted to rise to 6.1 percent on an annual average basis in FY 1992. Although higher than the last two years, a 6.1 percent unemployment rate is lower than the average rate of the 1980's (6.5 percent).



The following narrative provides a brief summary of the job outlook for eight major industry divisions in Colorado.

Mining: Mining employment increased by 200 jobs statewide in 1990. A loss of 100 jobs in metal mining was offset by a gain of 300 jobs in oil and gas extraction. Coal mining was unchanged.

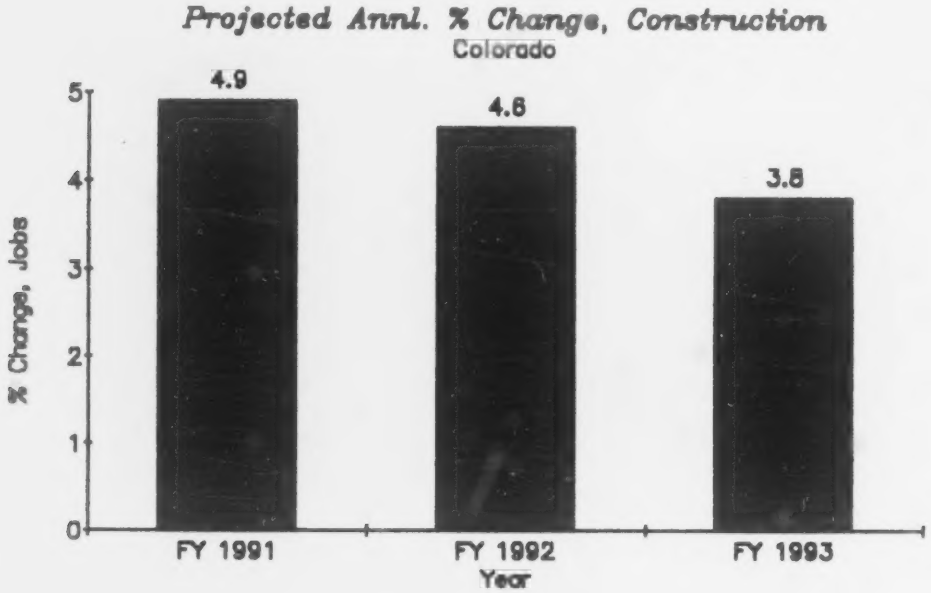
In fiscal years 1991 and 1992, mining employment is expected to increase by 500 total jobs, led by increases in metal mining and non-metallic minerals mining. For the purposes of this forecast, oil prices are expected to remain at their current price of approximately twenty dollars per barrel. Very little new exploration will be stimulated in Colorado at this price, but generous federal tax credits will provide some positive incentives for exploration.



Construction: Employment in the construction division increased by 2,300 jobs in 1990. Jobs were added in every sector, but the strongest increase was in heavy construction, which added 1,300 jobs.

Several factors will contribute to continued job growth in construction in the coming two years. The primary impetus for growth will be the construction of Denver's new airport, which will move into high gear in fiscal years 1991 and 1992. Increasing residential sales and declining inventories of existing homes should lead to slight increases in residential construction employment.

Overall construction employment is expected to increase by 6,300 jobs through fiscal year 1992.

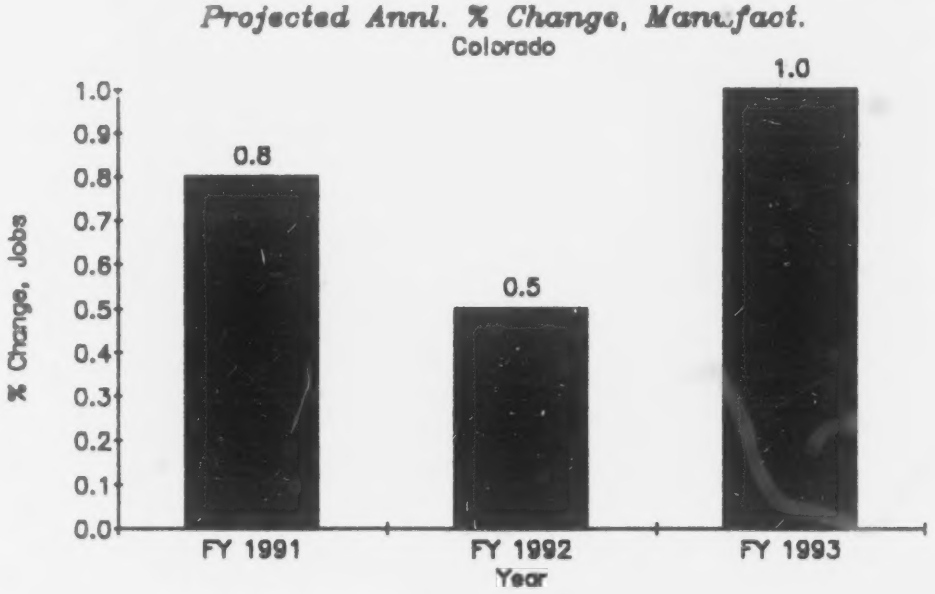


Manufacturing: According to the Current Employment Statistics (CES) data series, manufacturing employment declined by 200 jobs in 1990. However, the decline could be characterized as non-economic. Occasionally, firms are reclassified into a different industry group. In 1990, firms employing approximately 1,900 workers were reclassified from manufacturing into two other industry groups: communications and agriculture. Had this "non-economic code change" not occurred, manufacturing would have shown a gain of well over 1,500 jobs in 1990.

Weak performance is expected in the manufacturing division through fiscal year 1992. Weak sales have led many

manufacturers to announce cutbacks, and corporate restructuring decisions at a national level have affected plants in Colorado. Many previously strong export markets are also expected to soften, leading to weaker demand for manufactured goods.

An increase of 2,500 new jobs is expected in the manufacturing division through fiscal year 1992, although the increase could well be much smaller if the national recession extends beyond the middle of calendar 1991.

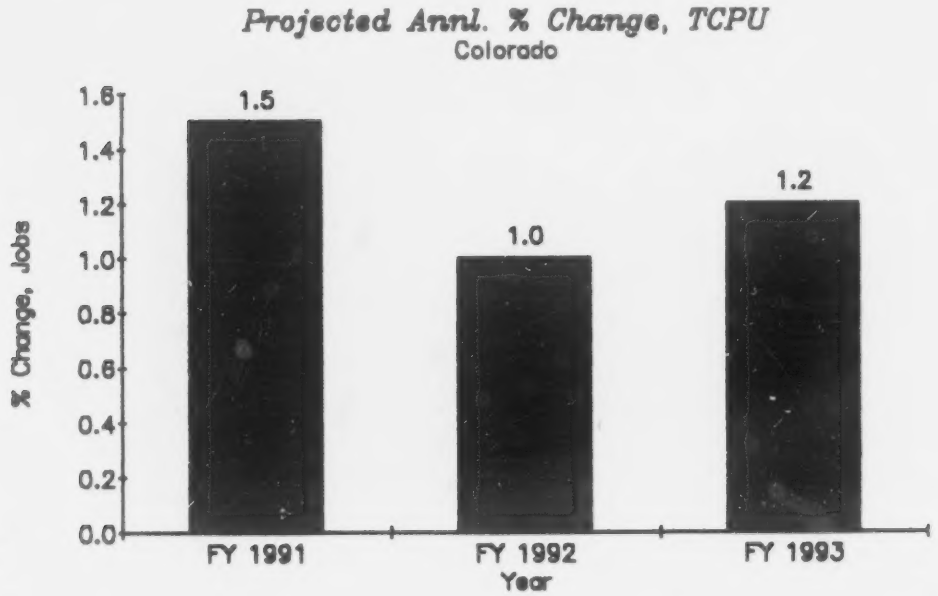


Transportation, Communications, and Public Utilities:

The TCPU industry division added 2,800 jobs in 1990, according to the CES series. However, around half of this increase was due to a reclassification of a large firm from manufacturing into TCPU.

The TCPU division is expected to exhibit below average growth through fiscal year 1992, adding about 1,300 jobs per year. Air transportation employment has suffered in the past year as the result of falling demand for air transportation and the weak financial condition of many airlines. Growth in communications employment has been stagnant as major

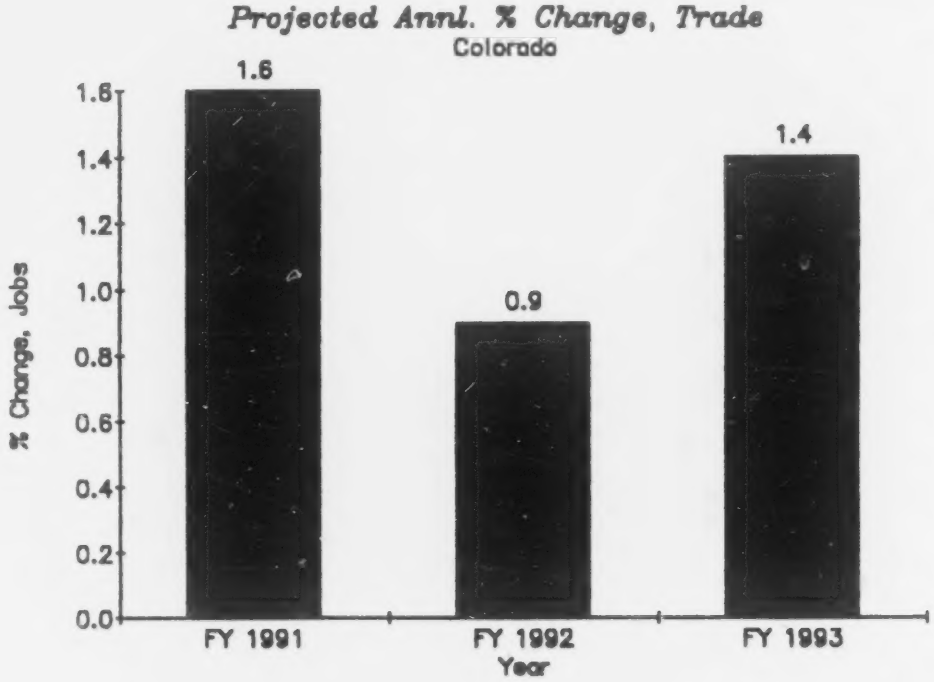
communications firms continue to focus on cost reductions. The strongest sectors in the TCPU division have been public utilities and trucking and warehousing. This should continue to be the case for at least the next two years.



Trade: The trade division added 6,500 jobs in 1990 after posting an 11,000 job gain in 1989. Sectors with the largest job gains were eating and drinking places (+2,100), general merchandise stores (+1,400), and wholesale durable goods (+900).

The rate of job growth in trade is expected to slow significantly in fiscal years 1991 and 1992. Slower income growth in Colorado will limit growth in consumer's disposable income. High debt levels and recessionary fears will limit consumer spending on big ticket items such as automobiles and home appliances. The national recession will have an impact on vacation plans and tourist dollars will not be as plentiful as they were in the past few years.

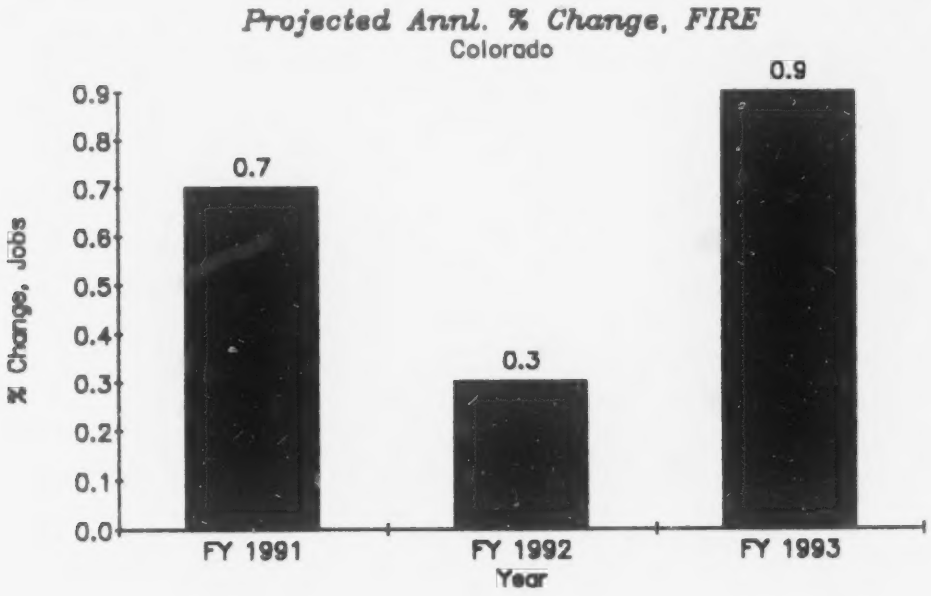
Trade employment is expected to grow by 5,900 jobs in fiscal year 1991 and by 3,400 jobs in fiscal year 1992.



Finance, Insurance, and Real Estate (FIRE): The FIRE division added 300 jobs in 1990 after growing by 1,100 jobs in 1989. A loss of 500 jobs in depository institutions was offset by gains of 300 jobs in insurance and 500 in real estate.

Banks and other depository institutions will continue to trim staff in 1991 as they strive to reduce costs. Slight job gains are expected in most other major sectors of FIRE. The insurance sector should be buoyed by an expanding population. Personal credit institutions will add jobs over the next three years as a result of growing demand for their services. Real estate should experience small job gains as a result of the improving activity in all areas of the market.

The FIRE division as a whole is expected to add approximately 1,000 net jobs through fiscal year 1992.

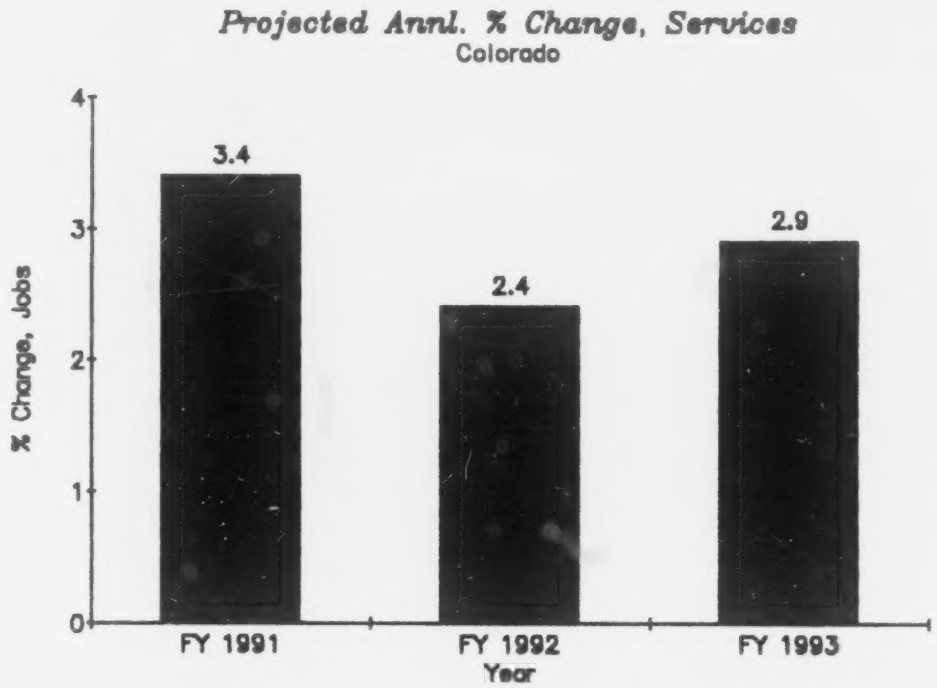


Services: Employment in private sector services increased by 18,200 jobs in 1990. Sectors adding the most jobs were health services (+5,900), engineering and management services (+3,200), hotels and other lodging (+2,300), and business services (+1,800).

The services division is expected to continue to be the strongest generator of new jobs in the coming three years. The primary reasons for this growth are:

1) Increasing demand for health care services due to breakthroughs in technology and treatments and increasing concern for personal health.
2) The growing use of "outsourcing," or contracting out, as a common business practice.
3) Increasing demand for educational and child care services.

Despite continued expansion, job growth in services is expected to be slower in the next two years, primarily due to slower growth in public education and belt-tightening by business and consumers. The services division (including public education) is expected to add 17,400 jobs in fiscal year 1991, followed by 12,700 jobs in fiscal year 1992.



Public Administration: Growth in tax revenue at the state and local levels is expected to be quite restrained through fiscal year 1992. Public administration employment is expected to grow by about 1600 jobs during that period. Many of the new jobs will probably be part-time and temporary staff positions.

NOTE: There are three major conceptual differences between estimates in the above table and estimates on the previous page. The above table contains elements of employment not covered by unemployment insurance. It is done on a calendar year rather than a fiscal year basis. Finally, government employment is shown separately rather than being combined with similar private sector employment (i.e. the above table is arranged by ownership, not by Standard Industrial Classification).

SECTION II

OCCUPATIONAL INFORMATION

COLORADO AND THE UNITED STATES

This section contains a small sample of the occupational information resources that are available from the Labor Market Information Section. Additional information can be obtained by calling 894-2576 or 894-2572.

Colorado's Occupational Outlook

Editor's Note: The following narrative is reprinted from the Program Year 1990 edition of the Annual Planning Information Report. New occupational projections, covering the years 1991-1996, should be available by the end of June 1991.

In Colorado, service occupations are projected to grow at the fastest pace of all the major occupational groups, 13.3 per cent for the 1990-1995 period. This translates into 37,490 new job opportunities. The largest number of new positions is expected to be created within the professional, paraprofessional and technical grouping. Blue collar occupations are expected to increase at the rate of 11.2 per cent, while the three slowest-growing occupational sectors are predicted to be clerical and administrative support (8.4 per cent), managerial and administrative (9.3 per cent), and sales (9.9 per cent).

Occupations that currently employ the greatest number of people, will contribute the most new positions to Colorado's economy by 1995. The top-twenty-growth occupations will be responsible for approximately one-third of the increase. (See chart in this section for a list of these occupations). Not surprisingly, these top performers are concentrated in the services and professional categories. At the other end of the spectrum, blue collar occupations that currently employ a small number of people predominate in job classifications that are expected to exhibit either no growth or losses.

Overall, managerial occupations are projected to increase by 9.3 per cent or 13,040 jobs by 1995. Almost half of these positions will be for general managers and top executives. Employment gains for managers reflect the growth predicted for their primary industry. In general, growth for construction, health, education, and service-related managers is expected to outstrip that for mining, production, real estate, and public administration managers.

More than half of the anticipated 43,480 increase in the professional category should arise from new positions for teachers, engineers, and health practitioners and technicians. Electrical and electronic engineers will account for almost half of the engineering increase, while registered nurses will be the major contributor to the growth in professional health careers. Other occupations in this area that are expected to add a significant number of jobs include electrical and electronic technicians, computer systems analysts, and computer programmers.

Retail salespersons, the classification that is anticipated to create the most new positions for Colorado's economy, is the major contributor (6,300 jobs) to the 19,700 job increase predicted for sales occupations. Another healthy increment to employment

growth should be the 3,500 positions expected for cashiers. Other sales categories likely to add more than 200 jobs annually include first-line sales supervisors, sales reps except scientific and retail, and sales floor stock clerks.

Although the clerical and administrative support arena is foreseen to be the slowest growing, 25,520 new positions are anticipated due to this component's relatively large share of Colorado's occupation mix. Three of the top 20 employment-growth occupations are contained within this grouping; general secretaries, general office clerks, and first-line clerical supervisors. Together they are expected to generate 1,850 new positions annually. Stenographers, statistical clerks, and credit checkers are among the occupations that are expected to lose employment. Opportunities for jobs within these classes should exist only from incumbents leaving their positions.

Like the services industry which contains a diverse range of businesses, service occupations encompass a wide variety of careers. Protective service, private household, food and beverage, health service, cleaning and building service, and personal service are the major occupational groupings contained in the services category. Janitors and cleaners, waiters and waitresses, combination food preparation and service workers, guards, food preparation workers, and restaurant cooks are the six service occupations expected to be among the 20 occupations that will generate the greatest job growth in Colorado. Except for a few occupations, primarily in the private household spectrum, service jobs are expected to have growth rates higher than the 10.8 per cent average anticipated for the state.

Agricultural occupations are underrepresented in these projections because the agricultural industry is not included either in the employment forecasts or in the occupational staffing patterns. The numbers for agricultural jobs only reflect their existence in other industries. For this reason, the largest number of new job creations should occur for gardeners and groundskeepers who are hired by many different types of concerns.

Construction trades are the foremost growth areas within the blue collar sector. These increases are principally a result of building Colorado's new airport and related construction. Thus, they should not necessarily be viewed as long-term opportunities. The largest number of individual occupational classes is contained within the blue collar component. Many of these classes are specific to one major industry. As such, employment is more widely spread, and thus, opportunities for a large number of positions being created in any one given occupation are more limited. Occupations that are predicted to provide a substantial number of new positions, primarily due to their relatively large current share of employment, include general utility maintenance repairers, automotive mechanics, heavy and light truck drivers, all other hand material movers, and all other helpers, laborers, and movers.

Colorado's anticipated occupational growth, like its industrial growth, is a reflection of the national economy for the occupations that are expected to create the most jobs.[1] Retail salespersons will also be the largest job generator at the national level. Other areas that will contribute large numbers of new positions include waiters and waitresses, cashiers, registered nurses, nursing aides, janitors and cleaners, and general managers and top executives. Many of the fastest-growing occupations at a national level are projected in health services occupations. These include medical assistants, home health aides, radiologic technicians, medical record technicians, and medical secretaries. Occupations outside of medical services expected to grow at a rapid pace include data processing equipment repairers, operations research analysts, paralegals, travel agents, and computer programmers and analysts. Among the occupations expected to decline nationally are electrical and electronic assemblers; chemical equipment controllers, operators, and tenders; farm workers; sewing machine operators; precision inspectors, testers, and graders; and hand packers and packagers.

SECTION IV

EMPLOYMENT SERVICE DATA

COLORADO

This section contains operations data from Colorado's Job Service Centers. Job Service applicants are presented by occupational group and race-ethnicity as well as other characteristics. An analysis of various services for the past two years is also presented. Job Service applicant data for specific regions of the State is included in each of the specific geographic sections.

Over-the-Year Change Analysis of
Services* to Individuals - FY's 1989-90

	Total Applicants	New and Renewal Applicants	Counseled	Tested	Enrolled in Training	Inactivated with Some Service	Total Placed	Permanent Placements (Over 150 Days)	Placed as a Result of Job Development	Placed after Counseling	Placed at $4.00 an Hour and Over

APPENDICES

A Note on the Data

The "Major Industry Division Forecasts" table for Colorado and each Service Delivery Area is based on the ES-202 data series, which is compiled by the Colorado Department of Labor and Employment based on unemployment insurance tax reports filed by employers in Colorado. The ES-202 series represents only those workers who are covered by unemployment insurance. Major categories of workers not covered by unemployment insurance are self-employed, railroad, unpaid family workers, domestic workers, and approximately half of the agricultural industry. Employment figures in the tables entitled "Labor Market Data Summary" represent estimates of total employment as opposed to covered employment. The table on page 19 presents estimates of those categories not covered by unemployment insurance.

With the exception of the table presented on page 19, all industrial analyses allocate most government employees to those private sector industries where comparable economic activity is taking place. The basis for this practice is the Standard Industrial Classification Manual published by the U.S. Office of Management and Budget. For example, public sector education is allocated to the major division of services. Public administration employment, since it has no private sector counterpart, is left to stand on its own, except on page 19, where it is included in the government division.

In an effort to hold down printing costs, we have omitted technical documentation from this publication. Users interested in methodological questions are welcome to call us at the number listed in the preface at the front of this publication.

Eligible Labor Surplus Areas for Bidding on Federal Contracts

Background

Employers located in labor surplus areas, as classified by the U.S. Department of Labor, may be given preference in bidding on federal procurement contracts. The purpose of providing this preference is to help direct governmental procurement dollars into areas in the most severe economic need, i.e., areas experiencing the highest current rates of unemployment.

The concept of channeling federal procurement money into high-unemployment areas dates back to the Korean Conflict of the early 1950's, when government officials feared that high unemployment and low utilization of plants and equipment in some areas would lead to erosion of our mobilization base and adversely affect our production capability. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on the nation's economic resources.

The Office of Defense Mobilization studied this problem, and, in February, 1952, issued **Defense Manpower Policy Number 4 (DMP-4)**. This policy implemented the idea of directing procurement contracts to employers in labor surplus areas, but, lacking a statutory base, the program was not successful. **Public Law 95-89**, passed August 4, 1977, provided statutory authority for the labor surplus area program by amending the **Small Business Act** and authorizing federal agencies to set aside contracts for employers who agree to carry out at least 51 percent of the contract in a labor surplus area.

Following the Urban and Regional Policy Group's 1977-78 review of federal programs, additional support was given to the labor surplus program because of its potential for providing assistance to distressed areas. In March, 1978, the General Services Administration (GSA) was directed to work with all federal agencies in setting targets for placing federal contracts in labor surplus areas and to monitor the agencies' performance in meeting said targets. The GSA was further directed to submit a semiannual report detailing the agencies' progress toward effecting their goals. These directives were later incorporated into **Executive Order 12073**, signed August 16, 1978.

Public Law 96-392 ("Small Business Administration) was enacted on July 2, 1980, permanently authorizing the labor surplus area program. This act authorized federal agencies to set aside contracts when there was a reasonable expectation that offers would be obtained from a sufficient number of firms to ensure awards at reasonable prices **and** established a new priority

category of partial set-asides for small businesses located in labor surplus areas.

Section 1-103, Executive Order 12073, assigned the responsibility of classifying labor surplus areas to the U.S. Department of Labor (DOL), continuing the practice begun with DMP-4. (The DOL is also given this task under **Executive Order 10582** implementing the "Buy American" Act.)

Procedures for Classifying Labor Surplus Areas

Labor surplus areas are classified on the basis of civil jurisdictions, rather than on a metropolitan-area or labor market-area basis. This ensures that contracts are directed to **specific** localities with high unemployment, rather than to all jurisdictions within a region, some of which may not meet labor-surplus criteria. "Civil jurisdiction" is now defined as either a city or township with a population of at least 25,000, or a county. In Connecticut, Massachusetts, Puerto Rico, and Rhode Island - states in which counties have limited or no governmental functions - classifications are done for individual towns or cities.

A civil jurisdiction is classified as a labor surplus area when its average unemployment rate was at least 20 percent above the average national unemployment rate for the 50 states, the District of Columbia, and Puerto Rico during the previous two calendar years. During periods of high national unemployment (8.3 percent for all states for at least two calendar years), areas are classified as labor surplus areas if their unemployment rates for the reference period were 10.0 percent or above. A "floor" concept of 6.0 percent is used to designate labor surplus areas when national unemployment has been 5.0 percent or below during the reference period.

A civil jurisdiction may also be designated a labor surplus area when it experiences a significant increase in unemployment that is not seasonal or temporary and that is not adequately reflected in the data for the reference period. The DOL's Employment and Training Administration may grant such "exceptional-circumstance" status only if petitioned to grant such status by the employment security agency of the state involved.

The annual listing of labor surplus areas becomes effective each October 1st and remains in effect until the following September 30th. This listing is updated whenever "exceptional-circumstance" petitions have been granted by the Employment and Training Administration. The reference period used in preparing the current list is January 1988 through December 1989. The national unemployment rate during this period was 5.5 percent; therefore, the qualifying unemployment rate for labor surplus-area designation was 6.6 percent, or 5.5 percent times 1.20.

Listing of Labor Surplus Areas

Eligible Areas	Civil Jurisdictions Included
Balance of Adams County	Adams County less Arvada, Aurora, Northglenn, Thornton, and Westminster
Alamosa County	Alamosa County
Archuleta County	Archuleta County
Chaffee County	Chaffee County
Clear Creek County	Clear Creek County
Colorado Springs	Colorado Springs in El Paso County

COMMONLY-USED TERMS, ACRONYMS AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children.

All other nonag - nonagricultural self-employed, unpaid family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BEA - Bureau of Economic Analysis, U.S. Department of Commerce.

BLS - Bureau of Labor Statistics.

CDET - Colorado Division of Employment and Training.

CDLE - Colorado Department of Labor and Employment.

Civilian labor force - all civilian noninstitutionalized individuals, 16 years of age or older, employed or employed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian noninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey.

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or counselor trainee 1) helps an applicant resolve problems of occupational choice or change or job adjustment and 2) obtains and records on the application and/or other appropriate applicant records one or more of the following: a) a summary statement describing the counseling problem; b) additional information contributing to a better definition of the problem or its solution; c) a statement of an occupational plan or recommendation for the solution of the problem; and d) when pertinent, a statement elicited in the course of followup concerning progress in carrying out the counseling plan and any further services needed.

DOL/ETA - U.S. Department of Labor, Employment and Training Administration.

DOT - Dictionary of Occupational Titles, U.S. Department of Labor.

Eligible population - those individuals who are eligible for services under the Job Training Partnership Act, i.e., individuals whose income is below the poverty level.

Employed - those individuals 16 years old and over who did any work at all during the monthly survey week; includes, full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive Order - a formal document issued by the President of the United States (or, in Colorado, the Governor) that has the force of law. Executive Orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local Job Service office has been hired by an employer and which the applicant has entered.

HHS - The U.S. Department of Health and Human Services.

Individuals placed - initial referrals, hirings, and entrances into jobs by applicants during a fiscal year. These activites together comprise "placement transactions."

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA - Job Training Partnership Act.

Job development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA - Labor Market Area.

MSA - Metropolitan Statistical Area.

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-establishment employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement."

Placement - the hiring by a public or private employment of an individual referred by the employment office for a job or an interview, provided that the employment office has completed all of the following steps: 1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; 2) made prior arrangments with the employer for the referral of an individual or individuals; 3) referred an individual who had not been specifically designated by the employers, except for referrals on agricultural job orders for a specific crew leader or worker; 4) verified from a reliable source (preferably the employer) that the individual has entered the job; and 5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for an applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, s/he is again considered to be available for referral to job openings or employability-development services.

SIC - Standard Industrial Classification, as found in the manual published by the Office of Management and Budget.

Testing - administering a test (a standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for and are actively seeking work.
